

Pore block model

$$B_{ion} = \frac{1}{1 + \left(\frac{C}{IC_{50}}\right)^h}$$

1

calculate

repeat for each  
channel (*ion*)

Channel conductance

$$g_{ion} \rightarrow \alpha \cdot g_{ion}, \quad \alpha = 1 - B_{ion}$$

2

simulate

LV features

3

simulate

repeat for different  
compound concentrations (*C*)

Calcium transient

4

collect

LV features  
dose-response curves

5

compare

repeat for all  
compounds

Model and  
experimental data  
comparison
